Lab Execution Steps

1. Open a terminal window.

2. Copy Project files to hive container.

   # docker cp /home/labuser/Project/ hdp_jupyterlab:/opt/workspace/

3. Open a Google Chrome window and type the following command in the top most address bar.
   # localhost:4888/

4. Navigate to the code files in Project folder and launch the Jupyter notebook instances for code files.

5. Refer project videos for step wise execution go these files.
